

Replaio - the best access to audio content publicly available on the internet

Public Audio URL - a hyperlink, i.e. a reference to publicly available audio content (including an internet radio station), publicly available on the Internet. The Audio URL is always under the overall and sole control of its owner.

Public URL address - a hyperlink, i.e. a reference to a website publicly available on the Internet. The URL is always under the overall and sole control of its owner.

Replaio offers two services:

- 1) Replaio Browser - a free web browser with a built-in audio content player, which allows, among others conveniently listening to internet radio available to the public on the internet.
- 2) Replaio Search - a content search engine on the public internet, with particular emphasis on URLs and Audio URLs linking to audio content, including the internet radio.

Replaio's mission and vision

Our mission is to provide users with easy access to audio content available to the public on the internet, and in particular to internet radio stations.

A decade ago, people listened to radio only on radio receivers which has shaped the specific way of consumption of this medium. One device, many stations, simple navigation. Listeners want it to stay that way, but not anymore on stationary receivers. Therefore, Replaio was created as a natural response to the needs of contemporary listeners.

Replaio does not transmit, not broadcast, not rebroadcast, not retransmit, or not distribute any audio content. Replaio is also not a hosting service, it does not store or duplicate any audio files.

Replaio has no control over the content available at specific URLs or Audio URLs.

What is Replaio Browser and how it works

Replaio Browser is a web browser with an advanced audio content player built-in.

The difference between the standard browser and the Replaio browser is that the Replaio browser is specialized in playing audio content (e.g. improving sound quality thanks to the use of an equalizer). Moreover, like a typical web browser, it allows users to browse the web and add websites to the list of favourites for quick and convenient access to favourite content. However, the Replaio browser is distinguished by additional functions related to playing audio content.

Replaio browser, at the user's request, establishes a connection between his device and content available at specific URLs or Audio URLs on the public internet.

The display of the website and the playback of the audio content takes place at the user's request. This happens by playing audio content available at the URL or Audio URL, owned and controlled by the owner of the website.

If the URL or Audio URL is available in a particular country, Replai Browser displays and plays content just like other web browsers.

What is Replai Search and how it works

Replai Search is a public URL and Audio URL search engine with a focus on URLs and Audio URLs linking to publicly available audio content, including internet radio. It allows users to search for URLs and Audio URLs by query by entering keywords.

Generating search results in Replai Search consists of 3 stages.

1. Scanning
obtaining information on public URLs and Audio URLs on the internet
2. Indexing
analysis of obtained URLs and Audio URLs in terms of public availability of audio content, including internet radio
3. Displaying the results
searching for the information included in the Replai index and proper presentation of the results to the user

The process of adding the URL or Audio URL to Replai Search begins with the Replai user filling out the form available at <https://repla.io/add-url>.

URLs and Audio URLs may only be submitted to Replai Search by an authorized person. The user submitting this information is responsible for the data submitted via the application form, both legally and materially. We also use the so-called scanning robots to find (only) publicly available URLs or Audio URLs on the internet.

Then our robots verify the entered data, including the correctness of the address, its availability or status (i.e. verification whether it is public content or not). We also check if the specified URL or Audio URL has not been previously blocked in the Replai Search Tool. In the next step, the "robots.txt" files are verified. If all the required conditions are met, the specified URL or Audio URL is added to Replai Search.

Public URLs

All URLs and Audio URLs stored in Replai Search are publicly available on the internet.

Replai is not the broadcaster, meaning it neither transmits nor mediates audio transmission. It either does not retransmit or interfere with the audio stream available at specific public URLs or Audio URLs.

Technically, the content available at certain public URLs and Audio URLs is displayed and played in Replai Browser in the same way as any other web browser.

Replai Browser connects the user's device directly to the URL or Audio URL owner's server for the sole purpose of displaying or playing content from a source on the internet that is located at a specific public URL or Audio URL.

Replai in no way changes the content available at the specified URLs and Audio URLs.

Replai does not breach access restriction protections in any way when used by URL and Audio URL owners.

The presence of URLs and Audio URLs in Replai Search is free. Taking care of free access to public content, we remove URLs or Audio URLs from Replai Search only in strictly defined circumstances, e.g. at the explicit request of their owners.

Through the search results in Replai Search, we direct users directly to specific URLs and Audio URLs, and we provide their owners with various useful tools (e.g. marketing tools, statistics, tools supporting the optimization of monetization - contact us for details).

All intellectual property rights in the content of URLs and Audio URLs belong to the owners of the URLs and Audio URLs. Replai is not responsible for the legality of the content accessible from public URLs and Audio URLs.

Replai users are always the recipients of the original share. All URLs and Audio URLs indexed by Replai Search are publicly available on the internet. They are not limited in any way by the owners of the pages they are published on, i.e. all Internet users have access to them. The solutions used by Replai (including embedding) do not make URLs and Audio URLs available to new audiences (new users).

Replai does not index URLs and Audio URLs that have security tools preventing content from being played directly from a specific URL or Audio URL (e.g., a temporary access key).

We do respect the rights and decisions of URL or Audio URL owners

Replai respects intellectual property rights and does not tolerate any infringement of them. We have developed a policy that includes a breach reporting procedure.

Replai fully respects the decisions of URL or Audio URL owners regarding their presence in Replai Search.

In order to facilitate the management of URL or Audio URL availability in Replai Search, we have created the Replai Search Tool system. We have developed the rules and provide different functions for their owners.

Replai Search Tool allows owners of URLs or Audio URLs to fully decide on the presence of their addresses in Replai Search, including cancelling acceptance of their presence in Replai Search at any time, blocking of adding or modification by unauthorized users.

Replai Search is a search engine only for publicly available, unsecured URLs and Audio URLs. Each of the owners of such addresses can prevent them from being added to search engines, including Replai Search. This can be done using commonly available solutions, incl. based on entries in robots.txt and .htaccess files or other (e.g. configuration of the validity time of a specific address).

These are generally accepted, cost-free and easy to implement mechanisms, interpreted by all resource indexing services on the internet. Information on this type of security is publicly available. More information can also be found later in this document.

Each owner of URLs and Audio URLs can apply security measures (e.g. by using the so-called temporary access key) against their playback in external browsers. These types of security are commonly used by entities that do not allow URLs and Audio URLs to be made publicly available.

The use of such security is clear information that such addresses will not be indexed by Replai Search.

Blocking and removing URL or Audio URL from Replai Search

Are you the owner of the URL or Audio URL and don't want your own URLs to be included in Replai Search? We encourage you to contact us directly at support@repla.io before making a final decision. We offer various additional options that may be of great interest to you.

If you want to block the possibility of indexing your URLs or Audio URLs, please use the 3 options available to do so. Choose the most convenient for you.

1. The entire broadcast is always and in any event managed entirely by you. All you need to do is change the status of your Audio URL from the public to authenticated and your content will cease to be available in Replai Search immediately. Our participation is not required to perform this option.

Note: if you want to remove content from other places on the internet - contact us, we provide a wide range of services for broadcasters of content on the Internet.

2. (Alternative option) Please send a list of your own URLs or Audio URLs that you are willing to block to support@repla.io.

All URLs or Audio URLs sent by you will be added by us (maximum within one workday) to the list of blocked addresses and from then until you delete them by you, they will not be indexed by our bots, nor will they be displayed in Replai Search results.

3. (Alternative option) Use standard mechanisms to block indexing bots, i.e. configure the robots.txt file appropriately

User-agent: Replaiobot
Disallow: /

or

User-agent: Replaiobot
Disallow: <https://stream.audio.com/abcdefghijkl>

Can Replaiio determine who the copyright for content at certain public URLs or Audio URLs belongs to?

Replaiio has no technical or legal means to verify or settle the copyright of the content available on the Internet publicly available URL or Audio URL.

Also, Replaiio is not an entity authorized to decide whether a given content available to the public at certain URLs and Audio URLs is legally available. Therefore, it cannot block and censor content available under certain public URLs and Audio URLs that have been added to Replaiio Search by its users or have been found in the publicly accessible Internet using mechanisms such as scanning bots.

It is forbidden to use our services to infringe copyright. We do not agree to add URLs or Audio URLs that infringe copyright to Replaiio Search, even if they are publicly available on the Internet.

Replaiio enables its users to view and play content available at third-party URLs or Audio URLs and is therefore not responsible for the content available at specific public URLs or Audio URLs.

Replaiio only displays and plays content that is publicly available on the internet. Third parties, i.e. the owners of URLs or Audio URLs, are responsible for the content, and in particular for the resulting infringement of copyright, industrial property rights and personal rights.

The implementation of the obligations imposed by the copyright law (e.g. geo-blocking) belongs to the owners of the Audio URL addresses.

Replaiio respects intellectual property rights and does not tolerate any infringement. Therefore, we encourage you to report any incidents that may be such a violation. However, we would like to point out that each notification of a violation may have legal consequences. Please carefully analyse the violation in question before reporting. To report any copyright infringement, please send a message to support@repla.io.

Graphic identification

The logo of an internet station is usually the so-called website ico or avatar (publicly available at a specific URL). Its display may be subject to standard cache mechanisms. If you want to send us a different file with your logo, please contact us at support@repla.io.

Image ads and the Premium version

It is thanks to image advertising that Replaiο remains free for its users. They allow us to constantly develop the application, take care of its quality and proper operation on various devices and different versions of systems.

We also provide the Premium version with no image ads, but the basic feature of Replaiο, which is playing content available at public URLs or Audio URLs, is and will always be free.

The one-off payment for the Premium version is a form of project development support and additionally maintaining the team working on the application.

Brand and the Replaiο team

Replaiο is a brand of Replaiο sp. z o.o. All other names, brands, and characters that may appear in the Replaiο application, on the Google Play site, and on other Replaiο sites are the property of their respective owners and are used for informational and identification purposes. Replaiο and the services we provide are in no way affiliated with these companies.

Replaiο is a small team of fans of radio and new technologies. We are open to questions, suggestions and cooperation. We provide a wide range of Internet services, with a special focus on services for broadcasters of radio stations (including creating websites, consulting on the presence of your radio station on the internet and on mobile devices).

The seller and supplier of the Replaiο application (Google Play Store) is:

Google Commerce Ltd.
70 Sir John Rogerson's Quay
Dublin 2, Ireland

and

AppGallery Store
Huawei Device Co. Ltd

If you have doubts or questions, please feel free to send us a message at support@repla.io.
